This book is designed to meet the requirement of the students of B.Tech and B.E. students. The book discusses in detail the following topics: Thermodynamics Phase Rule, Water and its Treatment, Corrosion and its Prevention, Lubrication and Lubricants, Polymer and Polymerization and Analytical Methods. The book is suitably illustrated with diagrams and a number of solved numerical examples from different universities are included to make the text more exhaustive and understandable. Practical part is also appended at the end of the book.

Coulson and Richardson's Chemical Engineering: Volume 3A: Chemical and Biochemical Reactors and Reaction Engineering, Fourth Edition, covers reactor design, flow modelling, gas-liquid and gas-solid reactions and reactors. Captures content converted from textbooks into fully revised reference material Includes content ranging from foundational through technical Features emerging applications, numerical methods and computational tools

The book Encyclopaedia of Engineering Chemistry ment for Engineering students. The present book is an attempt to fulfil the need of all engineering. Students of U.P.T.U. and as well as for the engineering students of other state. It cover the complete syllabus of chemistry prescribed by Technical Universities. The treatment given is simple lucid and comprehensive. Contents: Vol. I: 1. Water and its Treatment; 2. Stereochemistry of Carbon Compounds; 3. Corrosion and Its Preventions. Vol. II: 1. Fuels; 2. Chemical Bonding; 3. Environmental Chemistry; 4. Structure of Solids. Vol. III: 1. Polymers; 2. Molecular Structure and Chemical Bonding; 3. Chemical Kinetics; 4. Phase Reactions; 5. Electrochemistry. Vol. IV: 1. Organic Reaction Mechanism; 2. Analysis of Organic Compounds; 3. Conformational Analysis; 4. Electronic Theory of Valency; 5. Mechanism of the Walden Inversion.

The growing demand of chemicals and chemical allied products made mushrooming of chemical industries, which has led to a situation where there is an augmented necessity of more skilled professionals in technical field. In this book, there is a core emphasis given on the scientific principles upon which the unit operations, mainly heat transfer and mass transfer, are based and groups those with similar physical bases so that they may be considered together. The book covers in-depth knowledge of subject content with simplified diagrams and supportive data. Subject matter is divided into modules and chapters for ease of understanding.The book is very much useful for the degree students of industrial chemistry, chemical engineering, mechanical engineering and petrochemical engineering.

The Harmony Search Algorithm (HSA) is one of the most well-known techniques in the field of soft computing, an important paradigm in the science and engineering community. This volume, the proceedings of the 2nd International Conference on Harmony Search Algorithm 2015 (ICHSA 2015), brings together contributions describing the latest developments in the field of soft computing with a special focus on HSA techniques. It includes coverage of new methods that have potentially immense application in various fields. Contributed articles cover aspects of the following topics related to the Harmony Search Algorithm: analytical studies; improved, hybrid and multi-objective variants; parameter tuning; and large-scale applications. The book also contains papers discussing recent advances on the following topics: genetic algorithms; evolutionary strategies; the firefly algorithm and cuckoo search; particle swarm optimization and ant colony optimization; simulated annealing; and local search techniques. This book offers a valuable snapshot of the current status of the Harmony Search Algorithm and related techniques, and will be a useful reference for practising researchers and advanced students in computer science and engineering.

Due to various issues in the world including rapid urbanization and industrial processes, waste generation has reached levels that are becoming detrimental to the environment and the global population. Waste management has remained a challenging issue for many professional sectors as it is directly linked to an organization's performance; however, the implementation of efficient and cost-effective waste minimization plans is the first step in improving the global environment. Innovative technologies in waste management are emerging and can help professionals looking to implement more efficient methods of pollution control. The Handbook of Research on Waste Diversion and Minimization Technologies for the Industrial Sector is a pivotal reference source that provides vital research on the application of modern pollution-control methodologies in industrialized environments. While highlighting topics such as life cycle assessment, bioremediation, and thermal waste treatment, this publication explores environmental risk reduction scenarios as well as sustainable waste-collecting solutions. This book is ideally designed for researchers, industrialists, environmentalists, practitioners, policymakers, scientists, students, and academicians seeking current research on innovative advancements in waste minimization techniques.

Adsorption is one of the method that is in use for remediation of contaminated water. The experimental factors affecting the batch mode of adsorption of various metals and inorganic anions are discussed in this book. The elemental contaminants have been categorized into four major categories i.e. major toxic elements; essential elements having toxicity on excessive exposure; miscellaneous elements having undetermined effects; non-toxic elements having trivial or unidentified significance. In addition, anions like nitrate, perchlorate and sulphate as water contaminants are considered. This unique volume fills a niche in the area of water treatment. Key Features: Provides practitioners with the background they need to understand and apply batch adsorption processes to the purification of water Describes the actions of adsorption capacity or percentage removal with respect to factors affecting the adsorption process Excellent source of information for those working in the industry for remediation of metals and anions Discusses the current era of Anthropocene which is highly dependent on the anthropogenic mineral sources for its sustenance
