This book provides a self-contained introduction to the simulation of flow and transport in porous media, written by a developer of numerical methods. The reader will learn how to implement reservoir simulation models and computational algorithms in a robust and efficient manner. The book contains a large number of numerical examples, all fully equipped with online code and data, allowing the reader to reproduce results, and use them as a starting point for their own work. All of the examples in the book are based on the MATLAB Reservoir Simulation Toolbox (MRST), an open-source toolbox popular in both academic institutions and the petroleum industry. The book can also be

Every year around the globe, people cross paths with avalanches-some massive, some no deeper than a pizza box-often with deadly results. Avalanche expert Jill Fredston stalks these so-called freaks of nature, forecasting where and when they will strike, deliberately triggering them with explosives, teaching potential victims how to stay alive, and leading rescue efforts when tragedy strikes. Having spent decades trying to keep avalanches and people apart,

Fredston brings them together unforgettably in *Snowstruck*. From a rare store of personal experience, she conveys a panorama of perspectives: a skier making what may prove his final decision, a victim buried so tightly that he can't move a finger, rescuers racing both time and weather, forecasters treading the line between reasonable risk and danger. Seamlessly interweaving these accounts, Fredston brings to life the awesome forces of nature that can turn the mountains deadly-and the equally inexorable forces of human nature that lure us time and again into treacherous terrain.

"These three Dutchmen - respectively an international relations expert, a scientific journalist, and a chemical engineer (past chairman of the Royal Netherlands Chemical Society) - form part of that growing body of reasonable and qualified people who feel unease at the claims of 'scientific consensus' on climate change, and wonder at the policies flowing from those claims. If the science is flawed, plainly the policies are too. Worldwide, billions of public money will be mis-spent, unnecessary costs placed on existing industry, new industrial development hampered. Together, these three

authors are well-placed to point up the weaknesses in the scientific argument that global warming is a man-made phenomenon, and are able to analyse that murky place where the needs for recognition, research grants and votes all come together. Could it really be the case that the 'global warming crisis' is really as much about careers and power as anything else?"--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc.
