Following a successful symposium held in Leiden in 1995 a second international gathering took place, also in Leiden, two years later. "The perfect housekeeping guide for somebody who is overwhelmed with their mess and can ' t figure out how to start." – Liferhacker " An accessible guide on how to clean for normal people." – Livestrong "It actually changed my life and my home; I ' m serious." – Book Riot Finally, a housekeeping and organizational system developed for those of us who'd describe our current living situation as a " f\*cking mess " that we're desperate to fix. Unf\*ck Your Habitat is for anyone who has been left behind by traditional aspirational systems. The ones that ignore single people with full-time jobs; people without kids but living with roommates; and people with mental illnesses or physical limitations. Most organizational books are aimed at traditional homemakers, DIYers, and people who seem to have unimaginable amounts of free time. They assume we all iron our sheets, have linen napkins to match our table runners, and can keep plants alive for longer than a week. Basically, they ignore most of us living here in the real world! Interspersed with lists and challenges, this practical, no-nonsense advice relies on a 20/10 system (20 minutes of cleaning followed by a 10-minute break; no marathon cleaning allowed) to help you develop lifelong habits. It motivates you to embrace a new lifestyle in manageable sections so you can actually start applying the tactics as you progress. For everyone stuck between The Life-Changing Magic of Tidying Up and Adulthood, this philosophy is more realistic than aspirational, but the goal is the same: not everyone will have a showcase of a home, but whatever your habitat, you deserve for it to bring you happiness, not stress.

Since its formation in 1853 the story of the Victoria Police has been interwoven with Victorian social and political history. Following the amalgamation of seven separate and distinct police agencies in the colony, the resultant unified body was the first of its kind in Australia. Many events have shaped its development: the gold rushes, the Clunes riot, the Kelly outbreak, the maritime strikes, the coming of the motor car, the police strike, both world wars and the Vietnam war protests, the gangland wars, Black Saturday bushfires and the use of DNA to solve crimes all formed part of this mosaic. This revised edition of *The People's Force*, containing a new chapter and new illustrations, brings the history up to date to include a decade that has been full of turbulent change. The new chapter examines the administrations of Neil Comrie, Christine Nixon, Simon Overland, Ken Lay and Graham Ashton. New material deals with Silk and Miller, and other police shootings, the growth of terrorism, gender issues, racism and domestic violence. Written as a 'warts and all' history of the Victoria Police with the support and encouragement of the then Chief Commissioner S. I. ('Mick') Miller, who wanted a proper objective history of the force, not a public relations exercise. This third edition is owed largely to Miller's encouragement and his desire to see the history updated.

The essential introduction to the theory and application of linear models—now in a valuable new edition Since most advanced statistical tools are generalizations of the linear model, it is necessary to first master the linear model in order to move forward to more advanced concepts. The linear model remains the main tool of the applied statistician and is central to the training of any statistician regardless of whether the focus is applied or theoretical. This completely revised and updated new edition successfully develops the basic theory of linear models for regression, analysis of variance, analysis of covariance, and linear mixed models. Recent advances in the methodology related to linear mixed models, generalized linear models, and the Bayesian linear model are also addressed. *Linear Models in Statistics, Second Edition* includes full coverage of advanced topics, such as mixed and generalized linear models, Bayesian linear models, two-way models with empty cells, geometry of least squares, vector-matrix calculus, simultaneous inference, and logistic and nonlinear regression. Algebraic, geometrical, frequentist, and Bayesian approaches to both the inference of linear models and the analysis of variance are also illustrated. Through the expansion of relevant material and the inclusion of the latest technological developments in the field, this book provides readers with the theoretical foundation to correctly interpret computer software output as well as effectively use, customize, and understand linear models. This modern Second Edition features: New chapters on Bayesian linear models as well as random and mixed linear models Expanded discussion of two-way models with empty cells Additional sections on the geometry of least squares Updated coverage of simultaneous inference The book is complemented with easy-to-read proofs, real data sets, and an extensive bibliography. A thorough review of the requisite matrix algebra has been added for transitional purposes, and numerous theoretical and applied problems have been incorporated with selected answers provided at the end of the book. A related Web site includes additional data sets and SAS® code for all numerical examples. *Linear Model in Statistics, Second Edition* is a must-have book for courses in statistics, biostatistics, and mathematics at the upper-undergraduate and graduate levels. It is also an invaluable reference for researchers who need to gain a better understanding of regression and analysis of variance.

While most of us aren't hoarders we can all benefit from assessing and reducing the clutter in our homes--and then organizing what's left. Many things stop us from succeeding: the sheer scope of the project, the tendency to lose momentum if the job takes too long, and the fact that we're always acquiring new clutter. But what if it really took only a week to de-clutter the whole house, and then you even had the weekend to relax and enjoy your new clutter-free space? Could it really be that simple? Organizing and time management experts Sandra Felton and Marsha Sims show how with the right game plan and a healthy dose of adrenaline, anyone can de-clutter their home in just five days. With this systematic, team-based approach, even the most overwhelming de-cluttering job becomes doable. The authors' enthusiasm and energy keep readers pushing forward to the goal, and their time-tested tips and habits help readers maintain their hard-won gains. The authors even show how to deal with common obstacles to achieving and keeping a clutter-free house, like filing, storage needs, health issues, space restrictions, the car, and even family sabotage!
