Regulation and Criminal Justice
“I joined the police force in the mid-90s, so it was after a series of miscarriages of justice, of which this case was one,” said Mr Jukes, now an assistant commissioner in London.

Former bank manager Ronald Dalton never got to watch his three young children grow up. In 1989 he was convicted for a crime that never happened. His wife, Brenda, was later ruled to have choked to death on breakfast cereal not strangled as a pathologist had initially claimed. Dalton’s daughter, Alison, was in kindergarten when he was charged with second-degree murder in 1988. He attended her high school graduation on June 26, 2000, two days after his conviction was finally overturned. Behind the proud facade of Canada’s criminal justice system lie the shattered lives of the people unjustly caught within its web. Justice Miscarried tells the heartwrenching stories of twelve innocent Canadians, including David Milgaard, Donald Marshall, Guy Paul Morin, Clayton Johnson, William Mullins-Johnson, and Thomas Sophonow, who were wrongly convicted and the errors in the nations justice system that changed their lives forever.

DNA exonerations have shattered confidence in the criminal justice system by exposing how often we have convicted the innocent and let the guilty walk free. In this unsettling analysis, Garrett examines what went wrong in the cases of the first 250 people exonerated by DNA testing, and proposes systemic reforms.

This booklet provides a brief guide for persons accused and/or convicted of crimes they did not commit. The guide is intended for miscarriage of justice victims and those working to overturn the wrongful conviction.

The primary focus of this comparative and empirical work is to address wrongful convictions between China and common-law countries in order to promote a better understanding of wrongful convictions in China’s practice with the help of comparative analyses, verifiable and empirical data and case studies. It examines the scope of wrongful convictions and offers new insights into the worldwide movement to prevent them, assesses how far it has progressed and what reforms are most needed. The book suggests that adversarial and inquisitorial systems alike could benefit from this research and learn valuable lessons from one another on how to effectively reduce the risk of wrongful convictions.

This innovative work builds on Huff and Killias’ earlier publication (2008), but is broader and more thoroughly comparative in a number of important ways: (1) while focusing heavily on wrongful convictions, it places the subject of wrongful convictions in the broader contextual framework of miscarriages of justice and provides discussions of different types of miscarriages of justice that have not previously received much scholarly attention by criminologists; (2) it addresses, in much greater detail, the questions of how, and how often, wrongful convictions occur; (3) it provides more in-depth consideration of the role of forensic science in helping produce wrongful convictions and in helping free those who have been wrongfully convicted; (4) it offers new insights into the origins and current progress of the innocence movement, as well as the challenges that await the exonerated when they return to “free” society; (5) it assesses the impact of the use of alternatives to trials (especially plea bargains in the U.S. and summary proceedings and penal orders in Europe) in producing wrongful convictions; (6) it considers how the U.S. and Canada have responded to 9/11 and the increased threat of terrorism by enacting legislation and adopting policies that may exacerbate the problem of wrongful conviction; and (7) it provides in-depth considerations of two topics related to wrongful conviction: voluntary false confessions and convictions which, although technically not wrongful since they are based on law violations, represent another type of miscarriage of justice since they are due solely to unjust laws resulting from political repression.

Looks at judicial error and wrongful conviction in Canada, including the cases of David Milgaard, Donald Marshall, Guy Paul Morin, and Clayton Johnson.

Innocent graphically documents forty-two recent criminal cases to find evidence of shocking miscarriages of justice, especially in murder cases. Based upon interviews with more than 200 people and reviews of hundreds internal case files, court records, smoking-gun memoranda, and other documents, Scott Christianson gets inside the legal cases, revealing the mistakes, abuses, and underlying factors that led to miscarriages of justice, while also describing how determined prisoners, post-conviction attorneys, advocates, and journalists struggle against tremendous odds to try to win their exonerations. The result is a powerful work that recounts the human costs of a criminal justice system gone awry, and shows us how wrongful convictions can—and do—happen everywhere.

Innocent people are regularly convicted of crimes they did not commit. A number of systemic factors have been found to contribute to wrongful convictions, including eyewitness misidentification, false confessions, informant testimony, official misconduct, and faulty forensic evidence. In Miscarriages of Justice in Canada, Kathryn M. Campbell offers an extensive overview of wrongful convictions, bringing together current sociological, criminological, and legal research, as well as current case-law examples. For the first time, information on all known and suspected cases of wrongful conviction in Canada is included and interspersed with discussions of how wrongful convictions happen, how existing remedies to rectify them are inadequate, and how those who have been victimized by these errors are rarely compensated. Campbell reveals that the causes of wrongful convictions are, in fact, avoidable, and that those in the criminal justice system must exercise greater vigilance and openness to the possibility of error if the problem of wrongful conviction is to be resolved.

Misleading DNA Evidence: A Guide for Scientists, Judges, and Lawyers presents the reasons miscarriages of justice can occur when dealing with DNA, what the role of the forensic scientist is throughout the process, and how judges and lawyers can educate themselves about all of the possibilities to consider when dealing with cases that involve DNA evidence. DNA has become the gold standard by which a person can be placed at the scene of a crime, and the past decade has seen great advances in this powerful crime solving tool. But the statistics that analysts can attach to DNA evidence often vary, and in some cases the statistical weight assigned to that match, can vary enormously. The numbers provided to juries often overstate the evidence, and can result in a wrongful conviction. In addition to statistics, the way the evidence is collected, stored and analyzed can also result in a wrongful conviction due to contamination. This book reviews high-profile and somewhat contentious cases to illustrate these points, including the death of Meredith Kercher. It examines crucial topics such as characterization of errors and determination of error rates, reporting DNA profiles and the source and sub-source levels, and the essentials of statement writing. It is a concise, readable resource that will help not only scientists, but legal professionals with limited scientific backgrounds, to understand the intricacies of DNA use in the justice system. Ideal reference for scientists and for those without extensive scientific backgrounds Written by one of the pioneers in forensic DNA typing and interpretation of DNA profiling results Ideal format for travel, court environments, or wherever easy access to reference material is vital

“A chilling piece of journalism” from the bestselling author of Wrecking Crew: Demolishing the Case Against Steven Avery (Ron Franscell , author of Alice & Gerald). In this thrilling true crime book, bestselling and award-winning author John Ferak explores the murder, investigation, trial, conviction and eventual exoneration—the largest such ever in the United States—of the Beatrice 6. On February 5, 1985, one of the coldest nights on record, Beatrice, Nebraska widow Helen Wilson was murdered inside her second-floor apartment. The news of six arrests was absolutely stunning to the locals in this easy-going, blue-collar community of 12,000 residents. But why were six loosely connected misfits who lived as far away as Alabama, Colorado and North Carolina being linked to the rape and murder of a beloved small-town widow? After all six of the condemned were convicted of murder and sent away to prison for the ghastly crime, the town moved on, convinced that justice was served. For more than twenty-five years, the Beatrice 6 rotted in prison, until the unthinkable occurred in 2008 . . . In Failure of Justice, John Ferak delivers a “riveting account . . . [of] an overzealous police investigation that generated false confessions and false evidence. The unbelievable story of the Beatrice 6 provides a wake-up call at a time when serious wrongful convictions continue to come to light with disturbing frequency” (Brandon L. Garrett, Justice Thurgood Marshall Distinguished Professor of Law, University of Virginia School of Law). “One of the most bizarre stories I’ve ever heard of.”—Burl Barer, Edgar Award-winning true-crime author, host of Outlaw radio’s True Crime Uncensored
