Senator Rand Paul, leading national politician and 2016 Presidential candidate, presents his vision for America. From his electrifying thirteen-hour filibuster against administration-orchestrated drone strikes against U.S. citizens, to leading the

discourse on criminal justice, Senator Rand Paul has taken Washington by storm. His outreach to this country's minority communities alone- championing reforms of mandatory minimum sentencing, school choice, and the creation of enterprise zones for economically depressed areas- distinguishes him as a

politician and Republican the likes of which are rarely seen. What lies ahead is Senator Paul's plan for America, where lower taxes and smaller government empower a muscular and expansive middle class; an America that doesn't engage in nation-building or fight wars where the best outcome is stalemate; an

America that believes in constitutionally protected liberty and the separation of powers.

Resulting from ongoing, international research into fusion processes, the International Tokamak Experimental Reactor (ITER) is a major step in the quest

for a new energy source.The first graduate-level text to cover the details of ITER, Controlled Fusion and Plasma Physics introduces various aspects and issues of recent fusion research activ

In contrast to research on the fundamental mechanisms of High-Temperature

Superconductivity, in recent years we have seen enormous developments in the fabrication and application of High-Tc-superconductors. The two volumes of High Temperature Superconductivity provide a survey of the state of the technology and engineering applications of these materials. They comprise

extended original research papers and technical review articles written by physicists, chemists, materials scientists and engineers, all of them noted experts in their fields. The interdisciplinary and strictly application-oriented coverage should benefit graduate students and academic researchers in the mentioned

areas as well as industrial experts. Volume 1 "Materials" focuses on major technical advancements in High-Tc materials processing for applications. Volume 2 "Engineering Applications" covers numerous application areas where High-Tc superconductors are making tremendous impact.

The two volume-set, LNCS 8042 and LNCS 8043, constitutes the refereed proceedings of the 33rd Annual International Cryptology Conference, CRYPTO 2013, held in Santa Barbara, CA, USA, in August 2013. The 61 revised full papers presented in LNCS 8042 and

LNCS 8043 were carefully reviewed and selected from numerous submissions. Two abstracts of the invited talks are also included in the proceedings. The papers are organized in topical sections on lattices and FHE; foundations of hardness; cryptanalysis; MPC - new directions; leakage resilience; symmetric encryption

and PRFs; key exchange; multi linear maps; ideal ciphers; implementation-oriented protocols; number-theoretic hardness; MPC - foundations; codes and secret sharing; signatures and authentication; quantum security; new primitives; and functional encryption.

This book focuses on the application and development of information geometric methods in the analysis, classification and retrieval of images and signals. It provides introductory chapters to help those new to information geometry and applies the theory to several applications. This area has developed rapidly over recent years,

propelled by the major theoretical developments in information geometry, efficient data and image acquisition and the desire to process and interpret large databases of digital information. The book addresses both the transfer of methodology to practitioners involved in database analysis and in its efficient computational

implementation.

Upon its publication by the MIT Press in 1972, Learning from Las Vegas was immediately influential and controversial. The authors made an argument that was

revolutionary for its time -- that the billboards and casinos of Las Vegas were worthy of architectural attention -- and offered a challenge for contemporary architects obsessed with the heroic and monumental. The physical book itself, designed by MIT's iconic designer Muriel Cooper, was hailed as a masterpiece of

modernist design, but the book's design struck the authors as too monumental for a text that praised the ugly and ordinary over the heroic and monumental. The MIT Press published a revised version in 1977 -- a modest paperback that the authors felt was more in keeping with the argument of the book -- and the original Cooper-

designed book fell out of print and became
a highly sought-after collectors' item; it
now sells for thousands of dollars in the
rare book market, while the author-
redesigned paperback has remained
continuously in print at a price affordable
to students. Now, decades after the
original hardcover edition sold out, the

MIT Press is publishing a facsimile edition
of the original large-format Cooper-
designed edition of Learning from Las
Vegas, complete with translucent glassine
wrap. This edition also features a spirited
preface by Denise Scott Brown, looking
back on the creation of the book and
explaining her and Robert Venturi's

reservations about the original design. Learning from Las Vegas begins with the Las Vegas Strip and proceeds to "Ugly and Ordinary Architecture, or the Decorated Shed," on symbolism in architecture and the iconography of urban sprawl. As Scott Brown says in her introduction, the book "upended sacred

cows would not bad-mouth bad taste, and redefined architectural research.".

This text covers both basic science and clincal aspects of the cornea and associated external diseases. In this edition the editors have incorporated relevant basic science information into the clinical

science chapters. It also contains an expanded surgery section - especially refractive surgery. Emphasis on the third edition is on clinical information (the basic science has been incorporated into the clincial chapters). The clinical section has been expanded by ten per cent to reflect changes in the field.

Better than fireworks, this classic Beginner Book edited by Dr. Seuss celebrates all the wonderful things that come with summer! From trips to the beach and eating watermelon to fireworks and fishing, Alice Low and Roy McKie's Summer will have young readers eager for

the kind of fun only warm breezes and sunny weather can bring. Originally created by Dr. Seuss, Beginner Books encourage children to read all by themselves, with simple words and illustrations that give clues to their meaning.
