Understanding how second language task-based performance can be raised is vital for progress with task-based approaches to instruction. The chapters in this volume all attempt to advance this understanding, and do so within a viewpoint which assumes limited attentional capacities and accounts for second language speaking based on Levelt's model of first language speaking. Six empirical chapters present original studies. They explore the topics of task planning, familiarity of information in a task, task repetition, task characteristics, and the effects of using post-task transcription. The studies interweave with and build upon each other, reflecting their conjoint focus on how second language learning memory and attention limitations shape their performance in using the target language. In the concluding chapter the accumulated findings across these studies are discussed in terms of the nature of preparation for a task, the role of task structure, the respective claims of the Tradeoff and Cognition Hypotheses, the role of selective attention, and the implications of the studies for pedagogy. The book is a central reference for students in psycholinguistics, second language acquisition, and task-based language teaching.

This unique volume offers a comprehensive discussion of essential theoretical and methodological issues concerning the pivotal role of working memory in second language learning and processing. It includes theoretical chapters, empirical studies providing original data and new insights into the topic, and commentary chapters which chart the course for future research.

This volume honours Peter Skehan ' s landmark contributions to research in Task-Based Language Teaching. It offers state-of-the-art reviews as well as cutting-edge new research studies, all reflective of key theoretical and methodological issues in current research, such as the role and nature of task complexity and the distinct dimensions of L2 task performance. Collectively, these chapters celebrate Professor Skehan ' s seminal influence on TBLT and second language acquisition research, and they bear witness to the sustained academic mentoring and collaboration that have characterised his career. Contributed both by senior academics and more recent participants in SLA and TBLT research, the chapters variously explore conceptual frameworks and methodological insights on central issues in TBLT research, theoretical debates, innovative research paradigms and methodologies, as well as practical pedagogical proposals. The book provides a wide-ranging and balanced account of Skehan ' s work and its impact on other researchers, serving as an introduction as well as a critical review for both seasoned and novice researchers and for interested practitioners.

Second Language Task-Based Performance is the first book to synthesize Peter Skehan ' s theoretical and empirical contributions in one place. Exploring three distinct themes in each section (theory, empirical studies, and assessment), this influential body of work is organized in such a way that it provides an updated reflection on the material and makes it relevant to today ' s researchers. In each section, an early publication is matched by at least one later publication, followed by a newly written commentary chapter, the combination of which provides the important function of offering a wider-ranging discussion. This book is an invaluable resource for researchers interested in second language task-based research or second language acquisition more generally.

Task-based language teaching is now a well-established pedagogic approach but problematic issues remain, such as whether it is appropriate for all learners and in all instructional contexts. This book draws on the author ' s experience of working with teachers, together with his knowledge of relevant research and theory, to examine the key issues. It proposes flexible ways in which tasks can be designed and implemented in the language classroom to address the problems that teachers often face with task-based language teaching. It will appeal to researchers and teachers who are interested in task-based language teaching and the practical and theoretical issues involved. It will also be of interest to students and researchers working in the areas of applied linguistics, TESOL and second language acquisition.
