The Film Developing Cookbook is an up-to-date manual for photographic film development techniques. This book concentrates on films, their characteristics, and the developers each requires for maximum control of the resulting image. The Film Developing Cookbook specifically addresses the difficult subject of T-grain film development. It includes rarely found information on film development and the nature of film developers. This book will help photographers acquire a working knowledge of photographic chemistry that is relevant to black and white film developing and serve as a reference and refresher for photographers at all stages of their skill. This companion to The Darkroom Cookbook will help photographers become familiar with different developer formulas for achieving a wide range of pictorial effects, and teach them how to mix and use photographic solutions from scratch-even to create new ones. Many of the developing formulas and archival fixing solutions contained in The Film Developing Cookbook have never before been presented. The authors take bold and controversial stances on many widely accepted film developing dogmas. They tackle many of the widely accepted "myths" of film development. They reject the trend toward 'scientific evaluation' of films and developers in favor of the photographer developing a personal aesthetic without relying exclusively on densitometry or H&D curves. Topics covered in this manual include: · Films · Developer ingredients · Types of developers · Formulas · Speed increasing · Mixing and storing stock solutions · Stop baths, fixers, and washing · Safety · Chemical and equipment suppliers · Recommended development time for hundreds of films and developers

In recent years, film photography has witnessed a significant renaissance—and not just among those who have previously shot with film. Interest in film photography and analog photography has also grown enormously among those who only have experience shooting digitally. In *The Film Photography Handbook, 2nd Edition*, authors Chris Marquardt and Monika Andrae speak to both types of film photographers as they offer an easy-to-understand, complete resource to shooting film. In this updated and expanded edition, they address today's working climate, including such topics as the hybrid film/digital workflow, the digitization of negatives, and using smartphones for light metering and to assist in film processing. This book is intended for anyone who is curious about film and analog photography, whether you need a refresher course or are discovering this wonderful format for the first time. You'll learn how easy it is to shoot and process black-and-white film at home, and that just a little special equipment is needed to get into film photography. You'll learn all about:

- The important differences between film and digital photography
- Numerous film cameras, as well as how to buy a second-hand camera
- Film formats, from 35 mm to medium format and large format
- Exposure settings, tonal values, and tonal representations in different types of film, from color negatives and slides

to the enormous spectrum of black-and-white films • Processing film, covering everything you need to know: equipment, chemicals, and workflow • Scanning negatives to bring your analog photography into a digital workflow • Both presenting and archiving your prints and negatives Working in such an “analog” medium requires a unique approach to photography, and it fosters a completely different form of creativity. Working in film and embracing analog photography can also prove to be a great inspiration for your own digital photography, as well. *The Film Photography Handbook, 2nd Edition* covers it all—from the technical to the creative—and will have you shooting film in no time, whether it’s with an old rangefinder, an inexpensive Holga, or a medium-format Rolleiflex or Hasselblad.

Using a rich variety of imaginative approaches, this book illustrates camera construction techniques that range from the simplest adaptation of a tin can to precision engineering with state-of-the-art lenses.
