Embryology
Embryology (from Greek ἐμβρυον, embryon, "the unborn, embryo"; and -λογία, -logia) is the branch of biology that studies the prenatal development of gametes (sex cells), fertilization, and development of embryos and fetuses.Additionally, embryology encompasses the study of congenital disorders that occur before birth, known as teratology. ...

Embryology - Wikipedia
Embryology is a branch of science that is related to the formation, growth, and development of embryo. It deals with the prenatal stage of development beginning from formation of gametes, fertilization, formation of zygote, development of embryo and fetus to the birth of a new individual.

Embryology - an overview | ScienceDirect Topics
Embryology, the study of the formation and development of an embryo and fetus. Before widespread use of the microscope and the advent of cellular biology in the 19th century, embryology was based on descriptive and comparative studies.

Embryology | Britannica
Embryology is the branch of biology concerned with the development of new organisms. Embryologists track reproductive cells (gametes) as they progress through fertilization, become a single-celled zygote, then an embryo, all the way to a fully functioning organism.

Embryology - Definition, History and Careers | Biology ...
Embryo, the early developmental stage of an animal while it is in the egg or within the uterus of the mother. in humans the term is applied to the unborn child until the end of the seventh week following conception; from the eighth week the unborn child is called a fetus. first stages of human development Early stages of human development

Embryo | human and animal | Britannica
A human begins life as a fertilized ovum. This single cell gives rise to the millions of cells that form the human body. In the first few days following fertilization, the developing embryo consists of a ball of cells. This implants on the wall of the uterus and begins to grow further, supported by nutrients and blood from the mother.

What is Embryology? - Medical News
In our article on weeks 1-3 of embryonic development you'll learn that the first stage of development starts off with fertilisation.This is the process of male sperm fusing with the female ovum and it's the basis of the embryology covered in the article.

Embryology - TeachMeAnatomy
So in fact, this is a very important structure in embryology called the bilaminar disk. And we're gonna get another look at the bilaminar disk here. So I'll show you, we're actually gonna draw a little plane through the disk here. And if we take a cut view through this plane that I've drawn, it looks a little bit like this.

Early embryogenesis - Cleavage, blastulation, gastrulation ...
Embryology is the study of the development of organisms. This is as true of plants as it is of animals. Seed formation proceeds following fertilization in higher plants. The seed consists of the embryo, the seed coat, and another part sometimes called the endosperm.
