Principle of oil well production by nind - Scribd

After oil well production is turned to artificial lift production during oil field waterflooding, in order to adjust the producing pressure drawdown, utilize reservoir potential, and achieve stable oil production, the daily fluid production rate should be gradually increased with the increase in water cut and flowing bottomhole pressure, thus maintaining the rational producing pressure drawdown.

Oil Well Production - an overview | ScienceDirect Topics

The main objectives of these proposed technologies are to make development of oil and natural gas cost effective, more efficient, and more protective of the environment. Uses of appropriate technologies will also help find new reserves, improve drilling efficiency, reduce costs, and increase production.

Principles of Oil Well Production by T E W Nind - Alibris

The horizontal and vertical pressure gradients created by the production of oil causes a deformation of the oil-water (or oil-gas) contact. When the vertical pressure gradient exceeds the hydrostatic gradient down to the water zone, the water is pulled toward the well, resulting in a cone-shaped distortion of the oil-water contact.
